PLASTIC SURGERY UPDATE:

SKINVIVE™ Creating A Lasting Glow

SKINVIVE™ by JUVÉDERM® is the first and only hyaluronic acid microdroplet injectable for improving skin smoothness in the cheeks. The modified hyaluronic acid in SKINVIVE™ keeps your skin hydrated, looking healthy, and glowing. You may have seen hyaluronic acid as an ingredient in moisturizing creams or serums. Hyaluronic acid increases your skin's natural hydrating ability to retain moisture and softness. Hyaluronic acid, a water-attracting molecule found in your skin, naturally decreases with age and sun exposure. SKINVIVE™ by JUVÉDERM® uses microdroplets of hyaluronic acid to help address the texture changes and dullness that can result from the aging process. SKINVIVE™ boosts your skin's internal hydration to smooth cheeks, reduce fine lines, and give you a lasting glow. Tiny, intradermal microdroplets of hyaluronic acid are injected just below the surface of the skin, so you won't see any change in the shape or volume of your face, just hydrated, healthier-looking skin no matter your skin type or tone. SKINVIVE™ injectable treatment only takes about 20 minutes and lasts six months with optimal treatment. Patients reported high satisfaction with how glowing, hydrated, refreshed, and healthy their skin looked.

For additional information, visit bodybybloch.com. Treatments will be performed at The Met in Sarasota. Call 847.432.0840 to schedule an appointment.
